

Power Tool PAT Testing Kit

PAT testing kit for testing 110V + 230V tools and leads

Megger PAT 320 Starter Kit

This kit is perfect for people wanting to test:-

- **Power tools on construction sites (110V and 230V)**
- **Battery Chargers, forklift chargers etc**
- **Extension Leads (110V and 230V)**
- **2nd hand tools for resale**
- **Transformers**

The Megger PAT320 is a high quality PAT Testing machine, and is the one we recommend for testing tools, transformers and extensions- either 110V or 230V.

The PAT320 is one of the few on the market now still capable of delivering a high current for the earth bond test (25A) - most manufacturers now have resorted to a battery powered design which uses a lower current - great for office equipment but not really up to the job if we're talking about tools on a site.

The kit includes all the adaptors you will need to test 16A 110V tools and leads, and we've also included an adaptor to test any tool with a 32A plug fitted. You can also test 16A 110V extension leads and transformers with this kit.

The machine can also be used to test other equipment, domestic appliances such as kettles and toasters as well as computer (IT) equipment. All in all, a great all round tester, especially great for site equipment, but also versatile enough to test everything else you can think of!

Kit Includes:-

- **Megger PAT320 PAT Tester**
- **test lead and manual on CD Rom**
- **Carry Case for PAT Tester**
- **Manufacturer's calibration certificate** (doesn't require calibration until 12 months after first use)
- **1 rolls (500) cable wrap (tough) PASS labels**
- **2 rolls standard PVC tough labels**
- **1 set of 7 VDE insulated screwdrivers**
- **1 pair VDE wire cutting pliers**
- **1 pair VDE pliers**
- **1 pair VDE wire cutters**
- **10 spare 110V 16A plugs**
- **1 x 110V adaptor to test items with 32A plugs**
- **1 x short IEC lead to test 230V extension leads**
- **1 x short IEC lead to test 16A 110V extension leads (PTA2)**
- **1 x short adaptor lead to allow PAT Tester to run from 110V supply (PTA4)**

The kit includes tools to allow simple repairs (replacing a broken plug etc) and we've included 10 x 110V replacement plugs to get you started!

We can also supply adaptors for testing 3 phase equipment (16A, 32A and 63A) - ask us for more information!

For a suitable PAT test register, visit www.pat-testing-expert.com/support and download one of the free templates- no need to buy an expensive log book!
